

Welding Cable -BS638 Part 4, 0361TQ, EPR, CSP - 16mm² to 185mm²

Description

0361TQ is an orange sleeved flexible welding cable used for connection of an electric welding machine to the welding gun. This cable carries large current for the purposes of welding metal together in automatic and manual welding machines. It is high quality cable for all work from occasional use to a 100% duty cycle.

Suitable for use in factory assembly lines, conveyor systems, machine tools and car manufacturing.

Key Features

Voltage Rating
100 Volts

Minimum Bending Radius
Flexing: 6 x overall diameter

Flame Retardancy
BS EN 50525-2-81
BS EN/IEC 60332-1-2

Temperature Limits
Temperature Range: -20°C to +85°C

Core Colours

All sizes available in natural coloured insulation

Standards

- BS EN/IEC 60228
- BS EN/IEC 60332-1-2
- BS EN 50525-2-81

Construction

- **Conductor:** Class 5 tinned copper
- **Insulation:** EPR (Ethylene Propylene Rubber)
- **Separator:** Polyester Tape (PET)
- **Outer Sheath:** Chlorosulphonated polyethylene (CSP)
- **Sheath Colour:** Orange

QA Lab

Cleveland Cable Test & Training Lab

Our state-of-the-art cable testing facility ensures that every cable meets the highest standards of quality and compliance through continuous, rigorous testing. Where applicable, cables are independently tested and certified by BASEC to ensure full compliance.

CPR

Cleveland Cable Company is committed to compliance with the Construction Products Regulation (CPR). Where applicable, all cables manufactured after 1st July 2017 have been assessed in accordance with CPR requirements, with full supporting documentation available.

Our Sustainability Commitment

We are committed to the journey to Net Zero as a business partner, an employer and a community member.

By thinking and acting sustainably, we deliver excellent customer service while reducing carbon emissions in collaboration with our customers and suppliers.

ecovadis

Cleveland Cable Company has been independently assessed by EcoVadis, a globally recognised provider of business sustainability ratings. Our score places us among the top 35% of companies evaluated worldwide, reflecting our strong commitment to environmental, social, and ethical performance

BS638 (Part 4) WELDING CABLE – CURRENT CARRYING CAPACITY (AMPS)

| NOMINAL CROSS SECTIONAL AREA MM2 | CURRENT RATING FOR SINGLE CYCLE OPERATION OVER A MAXIMUM PERIOD OF 5 MINUTES | | | |
|-------------------------------------|------------------------------------------------------------------------------|-----|-----|------|
| | 100% | 80% | 60% | 35% |
| 16 | 135 | 145 | 175 | 230 |
| 25 | 180 | 195 | 230 | 300 |
| 35 | 225 | 245 | 290 | 375 |
| 50 | 285 | 305 | 365 | 480 |
| 70 | 355 | 385 | 460 | 600 |
| 95 | 430 | 470 | 560 | 730 |
| 120 | 500 | 540 | 650 | 850 |
| 150 | 580 | 630 | 750 | 980 |
| 185 | 665 | 720 | 860 | 1120 |

Duty Cycle and Current Carrying Capacity

The current carrying capacity of a welding cable depends on the length of the duty cycle. The duty cycle is the length of time during which a loaded current passes through the cable over an operation period of 5 minutes, expressed as a percentage of that period. For example, if the current is flowing for the whole 5 minutes the duty cycle is 100%, and if the current is flowing for 1 minute the duty cycle is 20%. As conductor temperature varies according to the time in use as well as current, ratings shown are given as a guide.

The permissible loading of the cable for duty cycles other than those shown in the table can be calculated using the following formula: $I = I_{100} \times \sqrt{100/F}$

Where: I: is the maximum permissible loading current for the required duty cycle.

I100 : is the maximum permissible loading current for a duty cycle of 100%.

F: is the required duty cycle calculated as a percentage of the 5 minute operation period.

Typical guidance values for different welding processes are as follows:

- Fully automatic welding 100%
- Semi-automatic welding 65 - 85%
- Manual Welding 30 - 60%
- Very infrequent or occasional welding 20%

Ambient Temperature De-rating Factors

To find the adjusted ampacity, multiply the standard rating from the previous table by the corresponding factor below:

| Ambient Air Temperature (°C) | De-rating Factor |
|------------------------------|------------------|
| 25°C | 1 |
| 30°C | 0.96 |
| 35°C | 0.91 |
| 40°C | 0.87 |
| 45°C | 0.82 |
| 50°C | 0.76 |
| 55°C | 0.71 |
